

Experiments to Determine the Comparative Quantities of Heat Evolved in the Combustion of the Principal Varieties of Wood and Coal Used in the United States

Filesize: 3.6 MB

Reviews

This pdf might be really worth a go through, and far better than other. It can be packed with wisdom and knowledge. It's been written in an exceedingly straightforward way and is particularly only soon after I finished reading through this pdf by which basically changed me, modify the way in my opinion.

(Earnestine Blanda)

EXPERIMENTS TO DETERMINE THE COMPARATIVE QUANTITIES OF HEAT EVOLVED IN THE COMBUSTION OF THE PRINCIPAL VARIETIES OF WOOD AND COAL USED IN THE UNITED ST

To download **Experiments to Determine the Comparative Quantities of Heat Evolved in the Combustion of the Principal Varieties of Wood and Coal Used in the United St** PDF, remember to follow the hyperlink under and download the document or have access to other information which are in conjunction with **EXPERIMENTS TO DETERMINE THE COMPARATIVE QUANTITIES OF HEAT EVOLVED IN THE COMBUSTION OF THE PRINCIPAL VARIETIES OF WOOD AND COAL USED IN THE UNITED ST** book.

General Books LLC. Paperback. Book Condition: New. This item is printed on demand. Paperback. 22 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1826. Excerpt: . . . Lavoisier, Crawford, Dalton, and Rumford, in succession, made experiments to determine the quantity of heat evolved in the combustion of various bodies. The apparatus used by the last was perfectly simple, and perhaps the most precise of the whole. The heat was conducted by flattened pipes of metal, into the heart of a body of water, and was measured by the temperature imparted. From the general table of results, it is only necessary for me to extract two, to show the force of the succeeding remark. The discrepancies in the preceding table, are sufficient to show the necessity of new experiments on the subject. As the experiments of M. Lavoisier, Dr. Crawford, and Mr. Dalton, did not comprise any article of fuel except charcoal, a more particular notice of them would be irrelevant to my purpose. The experiments of Count Rumford, to determine the quantity of heat evolved in the combustion of different woods, will alone be examined. In his very just remarks, he says, Many persons have already endeavoured to determine the relative quantities of heat furnished by wood and charcoal in their combustion; but the results of their inquiries have not been satisfactory. Their apparatus has been too imperfect, not to leave vast incertitude in the conclusions drawn from their investigations. Indeed, the subject is so intricate in itself, that with the best instruments, the utmost care is requisite, lest, after much labour, the inquirer should be forced to content himself with...
