LE MIRACLE ET LA CRITIQUE SCIENTIFIQUE

RareBooksClub. Paperback. Book Condition: New. Paperback. 212 pages. OCLC Number: 52597010 Excerpt: . . . Energetics: Explosives, propellants, and pyrotechnics (PEP), and undetonated ordnance. The evaluation criteria are: DSS specifically designed to address this classification of contaminants and can handle a wide range of contaminant types within this class. For example, specific volatile and semi-volatile compounds within the organic classification. DSS specifically designed to address this classification of contaminants and can handle only a portion of the range of contaminants within this classification. For example, only semi-volatile compounds within the organic classification. DSS can handle this classification of contaminants but does not take into consideration how various sub-classifications within this group may behave differently. Phase: Ability for the software to address each phase that a contaminant may exhibit. The phase will impact the contaminants transport through media; therefore, a DSS must be selected that can model the appropriate transport mechanism. The phases considered are: Gas: Contaminant exists as vapor and or gas that can move through the media. Liquid: Contaminant is present in an aqueous phase (dissolved in water). Non-Aqueous Phase: The separate phase portion of a contaminant that exists after its dissolved concentration in water reaches the saturation limit for that contaminant, commonly referred to as a non-aqueous phase liquid (NAPL). Often, NAPLs are grouped based on specific gravity. NAPLs with a specific gravity greater than water are known as Dense NAPLs (DNAPL). Those with a specific gravity less than water are known as Light NAPLs (LNAPL). DSS that can address all types of NAPLs are rated the highest. The evaluation criteria are: DSS designed to model this phase and utilize site and chemical specific parameters to tailor the analysis to site conditions. The model can address a variety...
